

Alfresco Repository

Folder Structure

Company Home (Top Level)

- After installing Alfresco the following folder structure can be seen:
 - **Data Dictionary** – functionality in the Alfresco content management solution stores its configuration in this folder
 - **Guest Home** – when anonymous access/guest access is enabled, which it is by default
 - *Imap Attachments* - Used by the IMAP Protocol integration
 - *IMAP Home* - Used by the IMAP Protocol integration
 - **Shared** – folder available to all users for sharing content (Shared Files)
 - **Sites** – this is the top folder for all site content
 - **User Homes** – each logged in user will have his or her own folder, called home folder (My Files)

Company Home/Data Dictionary

- Contains configurations for the CMS system
 - **Email Templates** – contains templates for emails sent out by Alfresco
 - *Imap Configs* – Used by the IMAP Protocol integration
 - **Messages** – messages for customizations (DYNAMIC deployment of labels)
 - **Models** – content models for customizations (DYNAMIC deployment of content models)
 - **Node Templates** – put template docs here that should show up in Create... | Create document from template

Company Home/Data Dictionary continued

- **Presentation Templates** – (*not used* - was used with Alfresco Explorer UI)
- *Publishing Root* – (*deprecated* - Channel Manager no longer available)
- **Quick Share Link Expiry Actions Space** - keeps info about quick share link configurations
- **Rendering Actions Space** – this is a folder used by the system to persist rendering actions
- **Replication Action Space** – this folder is used by the system to persist replication actions
- *RSS Templates* – (*not used* - was used with Alfresco Explorer UI)
- *Saved Searches* - (*not used* - was used with Alfresco Explorer UI)
- **Scheduled Actions** - Scheduled actions for customizations
- **Scripts** - contains JavaScripts used by for example rules

Company Home/Data Dictionary continued

- **Smart Folder Downloads** - Used by the Smart Folder feature
- **Smart Folder Templates** - JSON templates for smart folders / virtual folders
- **Solr Facets Space** - Store custom solr facet configurations in this folder
