# Introduction to Solr 6 integration with Alfresco - referred to as **Alfresco Search Services**

Packaging & Deployment change

Solr 4
Solr 6

Alfresco Repo. WAR ↔ Apache Solr 4. WAR

Apache Tomcat App server

Alfresco Repo. WAR ↔ Apache Solr 6. App

Apache Tomcat App server

jetty://

New Features and Improvements

- **Fingerprints**: It is now possible to generate a "fingerprint" of a document's content. This can be used to find similar documents.
- **Indexing Multiple Document Versions**: A standard search usually looks at the most recent version of a document. It is possible to tell Alfresco to index every version of a document, then you can search for content in old versions.
- **Performance:** The so called trackers have been re-written for better performance
